About NTIS—

The National Technical Information Service (NTIS) provides access to U.S. and foreign government-sponsored R&D and engineering research results.

As *the* source for government scientific and technical information, NTIS:

- Announces 150,000 summaries of completed and ongoing U.S. and foreign government-sponsored R&D and engineering activities each year. These summaries detail the knowledge and technology generated through U.S. Government's \$60 billion R&D effort.
- Provides the complete technical reports for most of these results.
- Manages the Federal Computer Products Center, which provides access to software, datafiles, and databases produced by Federal agencies.
- Manages the Center for the Utilization of Federal Technology (CUFT), which runs the most active inventions licensing program in the U.S. Government. CUFT also links U.S. firms to Federal laboratory contacts and technologies with its directories and catalogs.
- Offers U.S. firms access to more than 15,000 foreign government research and engineering programs. NTIS is the lead U.S. Government agency in the technical information exchange. Through agreements with hundreds of organizations, new R&D efforts are announced from leading industrialized nations such as Japan, West Germany, Great Britain, and France.

NTIS is a unique Government agency sustained only by its sales revenue. The cost of NTIS salaries, marketing, postage, and all other operating costs is paid for from this revenue. Costs are not covered by tax-supported Congressional appropriations.
